

Therm-O-Spray Cellulose Fibre Insulation:

The Professional Choice

Therm-O-Spray is a spray applied thermal and acoustical insulation installed by trained certified professionals. It is installed with an adhesive that binds the insulation to the structure to ensure even, thorough protection against heat loss. Therm-O-Spray is the natural choice for today's cost-conscious, environmentally-aware building or home owner. We process recycled newsprint through a special process until it is reduced to a light, fluffy, cotton-like material. This material is safe, ecologically-friendly and provides exceptional insulation.

Therm-O-Spray is ideal for a wide range of insulation purposes.

Why Our Customers Chose Therm-O-Comfort

"Therm-O-Spray offers a great alternative to the standard insulation usually found in new homes. It's dense, even application will ensure that the homeowner will not waste energy when heating or cooling their home. I'm really pleased that I used Therm-O-Spray."

- Ron Jefferies

"When we bought a newer home, we found that the room above our garage was very drafty and poorly insulated. With a little bit of research, we found out about Therm-O-Spray. We have seen a big difference in comfort level since we had Therm-O-Spray put in. The fact that Therm-O-Spray was an environmentally friendly choice made our decision very easy."

- Frank and Judy Waters

"I chose Therm-O-Spray for three main reasons. It's cost effective in helping cut down energy costs for years to come; it gives excellent insulation that is dense and even, and it's a green choice that I can feel good about without compromising cost or effectiveness. It's also nice to support a Canadian company from right here in Southwestern Ontario."

- Charlotte Benninger

THERM-O-SPRAY

SPRAY INSULATION THE PROFESSIONAL CHOICE

1

Versatile High Quality Insulation – Professionally Installed

2

Supported by Excellent Customer Service

3

Eco-friendly

4

Extremely Safe

■

Economical

THERM-O-SPRAY is the professional choice – a high quality, environmentally friendly insulation that saves money. Take comfort in choosing the best insulation from an outstanding company.

Therm-O-Spray is professionally installed by certified contractors trained by the manufacturer. Because Therm-O-Spray is bonded to the structure with an adhesive, it can be used in areas not suitable for batt insulation or blown products such as exposed ceiling and wall surfaces. In addition, less insulation is required for maximum effectiveness. Overall, due to its higher density and ability to fill in gaps and cracks and voids Therm-O-Spray can reduce air leakage when compared to batt insulation.

Therm-O-Comfort has built its success by taking care of customers starting from the manufacturing of the insulation fibre through to delivering the product on time. Therm-O-Comfort offers training and assistance in the use and installation of its products to builders and contractors. Therm-O-Comfort is with you every step, every time.

Made from 100% recycled wood products such as top quality newsprint, Therm-O-Spray is an environmentally sound product that helps recycle and reuse materials. Unlike synthetic fibreglass, it is made from organic fibres with little potential for skin irritations. Made with the highest quality recycled newsprint, Therm-O-Spray provides a better economic alternative to spray foam. In fact, it is priced competitively to batt insulation while providing better performance.

Therm-O-Spray is treated with a special blend of additives to protect the insulation material from fire and prevent the growth of mould, mildew, and fungi. The treated insulation is also effective in controlling insects such as ants, roaches and termites.

Therm-O-Spray protects buildings in the event of a fire. Studies¹ have shown that cellulose products like Therm-O-Spray can block the spread of fire by as much as 64%. Other insulation products such as fibreglass insulation can in some situations actually facilitate the spread of fire. Against rockwool insulation, which has historically been touted as “the” product of choice for fire safety, Therm-O-Spray provides as much as 33% more fire resistance.

In comparison to other insulation Therm-O-Spray is extremely cost effective. With the high-quality insulation that Therm-O-Spray provides, home and building owners pay lower heating and cooling costs thereby increasing the value of their initial investment in insulation. With mounting energy costs, insulation can play a key role in keeping household expenditures low.
